                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's disease, multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is one of the probes of the

The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                 2960
                                                                                                                                                                      3020
                                                                                                                                                                                                                                                                                                                                                                                           Probe #4322 for gene expression analysis in human cervical cell sample.

The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.

The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast,

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human breast and BT 474 cells. The method involves contacting the probes with a collection of detectably labelled nucleic acids derived from mRNA of human breast, and then measuring the label bound to each probe of the microarray. The probes are useful for verifying the expression of regions of genomic DNA predicted to except probe states. They are useful for gene discovery, and for expression analysis is useful for assessing the toxicity of chemical agents on cells. The microarray of this invention presents a far greater discesses of probes for measuring gene expression, with far less bias than expressed sequence transmission of functional information from genomic sequence. The reguence data for this patent did not form part of the invention. Note: The sequence data for this patent did not form part of the proposition of probes for this patent did not form part of the proposition of probes for this patent did not form at directly proposition and production of the probes patent did not form at directly proposition and production of the proposition and production of the probes patent did not form at directly production. But was obtained in electronic format directly produced and productions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2830 TTGGCGGGAAATCGTGTGAGCAGTGATGGATGGCTTGCCTTCATGGGTGTATTTGAGAAT 2889

```

```
The present invention relates to single exon nucleic acid probes for measuring human gene expression in a sample derived from human heart. The present sequence is one such probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human heart and vascular system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Single exon nucleic acid probes for analyzing gene expression in human hearts -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a single exon nucleic acid probe for measuring human gene expression in a sample derived from human floetal liver. The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

```
The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to human single exon nucleic acid probes (SENP). The present sequence is one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                 Probe #13523 for gene expression analysis in human cervical cell sample

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosing, grading, partiquing, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases
                                                                                                                                                                                                                                                                                  Probe; human; breast disease; breast cancer; development disorder; ss; inflammatory disease; proliferative breast disease; non-carcinoma tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel single exon nucleic acid probe used to measuring gene expression in a human breast .

nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes; the novel set of probes which hybridise at high stringency to a nucleic acid expressed in the human lung; measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with acollection of detectably labeled nucleic acids derived from human lung maRNA, and (b) measuring the label detectably bound to each probe of the array; identifying exons in a eukaryotic genome, comprising
3009
                                      Spatially-addressable set of single exon nucleic acid probes, used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    pulmonary histiocytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia; primary ciliary dyskinesis; pulmonary hypertension;

CC (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucled acids from eukaryote lung minns, to a single exon probe, having a fragment identical to the predicted exon, the probe is included in the above mentioned microarray; assigning exons to a single gene, comprising (a) identifying exons from genomic sequence by the method above and (b) measuring the expression of each of the exons in several tissues and/or cell types using hybridisation to a single exon andoror cell types using hybridisation to a single exon andoror cell types using hybridisation to a single exon andoror cell types using hybridisation to a single exon andoror cell types using hybridisation, or encoded by the expression of the exons with the exon, where a common pattern of the exons should be assigned to a single gene; a peptide comprising one expression of the exons (ORF). The probes are used for gene of 12011 sequences, mentioned in the specification, or encoded by the expression analysis, and for identifying exons in a gene, particularly using human lung derived mRNA and for the study of lung diseases (ORF). Interstitial lung disease (ILD), familial idiopathic pulmonary closes, neurofibromatosis, tuberous sclerosis, Gaucher's disease. CC (OCPD), interstitial lung disease (ILD), familial idiopathic pulmonary dysplasia, primarsy cliary dystinesis, pulmonary alveolar proteinosis, Raragener syndrome, sarcoidosis, pulmonary alveolar proteinosis, Raragener syndrome, a single exon probe open reading frame of the invention.

CC pulmonary alveolar proteinosis, Raragener syndrome, inbrocystic cond hyaline membrane disease. The present sequence is a single exon condenced to the printed specification, but was obtained in electronic of the printed specification, but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Caspase recruitment domain; CARD; ss; NB-ARC; ANGIO-R; LRR; SAM; abnormal cell proliferation; cancer; abnormal cell death; apoptosis; autoimmune disease; inflammation; keratinocyte hyperplasia; inflammatory hyperplasia; inflammation; smooth muscle cell proliferation; balloon angioplasty; restenosis; glioma; carcinoma; sarcoma; melanoma; leukaemia; allergy; arthritis; lupus; Schrogen's syndrome; Crohn's disease; graft-versus-host disease; stroke; myocardial infarction; heart is neurodegenerative disease; parkinson's disease; hizheimer's disease; HIV; human immunodeficiency virus infection.

The invention relates to an isolated caspase recruitment domain (CARD) containing polypeptide, or a CARD, NB-ARC, ANGIO-R, LRR or SAM domain from it, and the polynucleotides encoding them. Also included are a recombinant vector comprising the polynucleotide, recombinant cells containing the vector (e.g. bacteria, yeast, plant, animal, mammalian and insect cells) and an anti-CARD antibody. The CARD-containing polypeptide and CARD-encoding nucleic acid are useful for treating a pathology characterised by abnormal cell proliferation (e.g. cancer), abnormal cell death (apoptosis), autoimmune diseases or inflammation. In particular, the polypeptide and nucleic acid are useful for treating carticular, the polypeptide and nucleic acid are useful for treating exerticular, the polypeptide and nucleic acid are useful for treating carticular, the polypeptide and nucleic acid are useful for treating carticular, the polypeptide and nucleic acid are useful for treating carticular, the polypeptides and nucleic acid are useful for treating carticular, the polypeptides and nucleic acid are useful for treating carticular, the polypeptides and nucleic acid are useful for treating cartenosis, inflammatory hyperplasia, fibroais, smooth cartenosis, attritis, lupus, Schroqen's syndrome, Crohn's disease, arthritis, lupus, Schroqen's syndrome, Crohn's disease, cartenosis, dise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     In
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           failure,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New caspase recruitment domain (CARD)-containing polypeptides and encoding nucleic acids, useful for treating abnormal cell proliferation or cell death, autoimmune diseases or inflammation, e.g. carcinomas, arthritis or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 2043

 The present live function describes oligoniclecting in the present live functions described from substitution of transcription units that populate a genome. The library comprises several oligonuclectides, each capable of hybridising selectively to a set of messenger RNAs transcribed from a given transcription unit of the genome, which encodes one or more messenger RNA splice variants. The oligonucleotide libraries are useful for detecting mRNAs from a blological sample, in expression profilling studies, in qualitatively or the genome, which encodes one or more messenger RNA splice variants. CC quantitatively characterising the corresponding transcriptome, and in categorial sample, transcripts and splice variants of human or animal transcriptomes. The libraries may also be used as specialised minical bloragical or pathological state, and so allowing the certificate bloidical or pathological state, and so allowing the detection of tissue—and pathology-specific genes; and to detect RNA transcripts and splice variants of a transcriptome of a patient suffering condition; to detect developmental specific genes; and to detect RNA transcripts and splice variants of a transcriptome of a patient suffering from a particular disorder. ABNA7253 to ABNE9589 represent condition; the exemplification of the present invention.

Croming a particular function areas from rats, humans and mice, which are used in the sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO cate the warm of the present invention.

Croming a firm part for this patent did not form part of the printed cate for this patent did not form part of the present invention.

Croming a firm patent for this patent did not form part of the printed in electronic format directly from WIPO cate the warm of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                             New oligonucleotide libraries comprising oligonucleotides which selectively hybridize to mRNAs transcribed from a transcription unit of a genome, useful for detecting tissue-, pathology-, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes oligonucleotide libraries for detecting

containing polypeptide, or a CARD, NB-ARC, ANGIO-R, LRR or SAM domain from it, and the polynucleotides encoding them. Also included are a recombinant vector comprising the polynucleotide, recombinant cells containing the vector comprising the polynucleotide, recombinant cells and an anti-CARD antibody. The CARD-containing and insect cells) and an anti-CARD antibody. The CARD-containing a polypeptide and CARD-encoding nucleic acid are useful for treating a pathology characterised by abnormal cell proliferation (e.g. cancer), abnormal cell death (apoptosis), autoimmune diseases or inflammation. In parthology characterised by abnormal cell proliferation (e.g. cancer), abnormal cell proliferation in arteries following balloon angioplasty (restenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias, creatinosty places, arthritis, lugus, Schrogen's syndrome, Crohn's disease, graft-versus-host disease, stroke, myocardial infarction, heart failure, incuradegenerative diseases, stroke, myocardial infarction, heart failure, incuradegenerative diseases, stroke, myocardial infarction, heart failure, incuradegenerative diseases (e.g. Parkinson's disease or Alzheimer's containing and p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated caspase recruitment domain (CARD)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              disease) or immunodeficiency associated disease (e.g. human immunodeficiency virus (HIV) infection). The nucleic acids are useful in a variety of diagnostic applications. The present sequence is a PCR primer used to amplify a nucleic acid encoding a CARD-containing protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

The invention relates to an isolated caspase recruitment domain (CARD) containing polypeptide, or a CARD, NB-ARC, ANGIO-R, LRR or SAM domain from it, and the polynucleotide, recombinant vector comprising the polynucleotide, recombinant cells containing the vector (e.g. bacteria, yeast, plant, animal, mammalian and insect cells) and an anti-CARD antibody. The CARD-containing a polypeptide and CARD-encoding nucleic acid are useful for treating a pathology characterised by abnormal cell proliferation (e.g. cancer), abnormal cell death (apoptosis), autoimmune diseases or inflammation. In parthology characterised by abnormal cell proliferation in arteries following balloon angioplasty (restanosis), gliomas, carrinomas, melanomas, leukaemias, allergies, arthritis, lupus, Schrogen's syndrome, Crohn's disease, graft-versus-host disease, stroke, myocardial infarction, heart failure, neurodegenerative disease, stroke, myocardial infarction, heart failure, immunodeficiency associated disease (e.g. human immunodeficiency associated disease (e.g. human immunodeficiency virus (HIV) infection). The present sequence is a containing properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New caspase recruitment domain (CARD)-containing polypeptides and encoding nucleic acids, useful for treating abnormal cell proliferation or cell death, autoimmune diseases or inflammation, e.g. carcinomas,

The invention relates to an isolated caspase recruitment domain (CARD) containing polypeptide, or a CARD, NB-ARC, ANGIO-R. LER or SAM domain from it, and the polynucleotides encoding them. Also included are a recombinant vector comprising the polynucleotide, recombinant calls containing the vector (e.g. bacteria, yeast, plant, animal, mammalian and insect cells) and an anti-CARD antibody. The CARD-containing polypeptide and CARD-encoding nucleic acid are useful for treating a palypeptide and CARD-encoding nucleic acid are useful for treating a particular, the polypeptide and nucleic acid are useful for treating extinuctor hyperplasia, inflammatory hyperplasia, fibrosis, smooth muscle cell polification in arteries following balloon angloplasty (restenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias, clestenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias, allergies, arthritis, lupus, Schrogen's syndrome, Crohn's disease,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated caspase recruitment domain (CARD) -containing polypeptide, or a CARD, NB-ARC, ANGIO-R, LRR or SAM domain from it, and the polynucleotides encoding them. Also included are a recombinant vector comprising the polynucleotide, recombinant cells containing the vector (e.g. bacteria, yeast, plant, animal, mammalian and insect cells) and an anti-CARD antibody. The CARD-containing
                                                                                                                                                                                                                                                                                                                                                  Caspase recruitment domain; CARD; ss; NB-ARC; ANGIO-R; LRR; SAM; abnormal cell proliferation; cancer; abnormal cell death; apoptosis; autoimmune disease; inflammation; keratinocyte hyperplasia; inflammation; keratinocyte hyperplasia; inflammation; smooth muscle cell proliferation; balloon angioplasty; restenosis; glioma; carcinoma; sarcoma; melanoma; leukaema; allergy; arthritis; lupus; Schroger; syndrome; crohn's disease; graft-versus-host disease; stroke; PCR primer; mayocardala infarction; heart fallure; neurodegenerative disease;
          neurodegenerative diseases (e.g. Parkinson's disease or Alzheimer's disease) or immunodeficiency associated disease (e.g. human immunodeficiency virus (HIV) infection). The nucleic acids are useful in a variety of diagnostic applications. The present sequence is a PCR primer used to amplify a nucleic acid encoding a CARD-containing

```
polypeptide and CARD-encoding nucleic acid are useful for treating a pathology characterised by abnormal cell proliferation (e.g. cancer), abnormal cell death (apoptosis), autoimmune diseases or inflammation. In particular, the polypeptide and nucleic acid are useful for treating exticular, the polypeptide and nucleic acid are useful for treating construction by proliferation in arteries following balloon angioplasty (restenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias, allergies, arthritis, lupus, Schrogen's syndrome, Crohn's disease, cardians host disease, stroke, myocardial infarction, heart failure, neurodegenerative diseases (e.g. Parkinson's disease or Alzheimer's disease) or immunodeficiency associated disease (e.g. human in a variety of diagnostic applications. The present sequence is a per primer used to amplify a nucleic acids are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New caspase recruitment domain (CARD)-containing polypeptides and encoding nucleic acids, useful for treating abnormal cell proliferation or cell death, autoimmune diseases or inflammation, e.g. carcinomas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Caspase recruitment domain; CARD; ss; NB-ARC; ANGIO-R; LRR; SAM; abnormal cell proliferation; cancer; abnormal cell death; apoptosis; autoimmune disease; inflammation; keratinocyte hyperplasia; inflammation; smooth muscle cell proliferation; balloon angioplasty; restenosis; glioma; carcinoma; sarcoma; melanoma; leukaemia; allergy; arthritis; lupus; Schrogen's syndrome; Crohn's disease; graft-versus-host disease; stroke; PCR primer; myocardial infarction; heart failure; neurodegenerative disease; Parkinson's disease; HIV;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         õ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                           recombinant vector comprising the polynuclectide, recombinant cells containing the vector (e.g. bacteria, yeast, plant, animal, mammalian and insect cells) and an anti-CARD antibody. The CARD-containing polypeptide and CARD-encoding nucleic acid are useful for treating a pathology characterised by abnormal cell proliferation (e.g. cancer), abnormal cell death (apoptosis), autoimmune diseases or inflammation. In particular, the polypeptide and nucleic acid are useful for treating keratinocyte hyperplasia, inflammatory hyperplasia, fibrosis, smooth muscle cell proliferation in arteries following balloon angloplasty (restenosis), gliomas, carcinomas, melanomas, leukaemias, allergies, arthritis, lupus, Schrogen's syndal infarction, heart failure, murodepencrative disease, stroke, myocardial infarction, heart failure, and provedencrative diseases (e.g. Parkinson's disease or halbeimer's harraction, heart failure, and the stroke in the college of the college
                                                                                                     The invention relates to an isolated caspase recruitment domain (CARD) containing polypeptide, or a CARD, NB-ARC, ANGIO-R, LRR or SAM domain from it, and the polynucleotides encoding them. Also included are a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Caspase recruitment domain; CARD; ss; NB-ARC; ANGIO-R; LRR; SAM; abnormal cell proliferation; cancer; abnormal cell death; apoptosis; autoimmune disease, inflammation; keratinocyte hyperplasia; inflammation; keratinocyte hyperplasia; inflammatory hyperplasia; inflorosis; smooth muscle cell proliferation; balloon angioplasty; restenosis; glioma; carcinoma; sarcoma; melanoma; leukaemia; allergy; arthritis; lupus; Schrogen's syndrome; Crohn's disease; graft-versus-host disease; stroke; PCR primer; myocardial infarction; heart failure; neurodegenerative disease; parkinson's disease; Alzheiner's disease; HIV; human immunodeficiency virus infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         disease) or immunodeficiency associated disease (e.g. human immunodeficiency Virus (HIV) infection). The nucleic acids are useful in a variety of diagnostic applications. The present sequence is a PCR primer used to amplify a nucleic acid encoding a CARD-containing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

```
The invention relates to an isolated caspase recruitment domain (CARD)

containing polypeptide, or a CARD, NB-ARC, ANGIO-R, LRR or SAM domain

from it, and the polyucibeotides encoding them. Also included are a

recombinant vector comprising the polyucibeotide, recombinant cells

containing the vector (e.g. bacteria, yeast, plant, animal, mammalian

and insect cells) and an anti-CARD antibody. The CARD-containing

polypeptide and CARD-encoding nucleic acid are useful for treating a

pathology characterised by abnormal cell proliferation (e.g. cancer),

abnormal cell death (apoptosis), autoimmune diseases or inflammation. In

particular, the polypeptide and nucleic acid are useful for treating

keratinocyte hyperplasia, inflammatory hyperplasia, fibrosis, smooth

muscle cell proliferation in arteries following balloon angioplasty

crestenosis), gliomas, carcinomas, ascromas, melanomas, laukaemias,

allergies, arthritis, lugus, Schrogen's syndrome, Crohn's disease,

graft-versus-host disease, stroke, myocardial infarction, heart failure,

neurodegenerative diseases (e.g. Parkinson's disease or Alzheimer's

containing the vector can and the containing the conta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated caspase recruitment domain (CARD) containing polypeptide, or a CARD, NB-ARC, ANGIO-R, LRR or SAM domain from it, and the polynucleotides encoding them. Also included are a recombinant vector comprising the polynucleotide, recombinant cells ontaining the vector comprising the polynucleotide, recombinant cells on and an anti-CARD antibody. The CARD-containing polypeptide and CARD-encoding nucleic acid are useful for treating a pathology characterised by abnormal cell proliferation (e.g. cancer), abnormal cell death (apoptosis), autolimune diseases or inflammation. In particular, the polypeptide and nucleic acid are useful for treating keratinocyte hyperplasia, inflammatory hyperplasia, fibrosis, smooth muscle cell proliferation in arteries following balloon angiophasty crestenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias, allerides, arthitis, lupus, Schrogen's syndrome, Crohn's disease, crowing artoke, myocardial infarction, disease, containing in a variety of diagnostic application. The nucleic acids are useful in a variety of diagnostic applications. The present sequence is a process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                            New caspase recruitment domain (CARD)-containing polypeptides and encoding nucleic acids, useful for treating abnormal cell proliferation or cell death, autoimmune diseases or inflammation, e.g. carcinomas, arthritis or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Caspase recruitment domain; CARD; ss; NB-ARC; ANGIO-R; LRR; SAM; abnormal cell proliferation; cancer; abnormal cell death; apoptosis; autoimmune disease; inflammation; keratinocyte hyperplasia; inflammatory hyperplasia; fibrosis; smooth muscle cell proliferation; balloon angioplasty; restenosis; glioma; carcinoma; sarcoma; melanoma; leukaemia; allergy; arthritis; lupus; Schrogen's syndrome; Crohn's disease; graft-versus-host disease; stroke; PCR primer; myocardial infarction; heart failure; neurodegenerative disease; parkinson's disease; Alzhelmer's disease; HIV;

The invention relates to an isolated caspase recruitment domain (CARD) containing polypeptide, or a CARD, NB-ARC, ANGTO-R, LRR or SAM domain from it, and the polynucleotides encoding them. Also included are a recombinant vector comprising the polynucleotide, recombinant cells a recombinant vector comprising the polynucleotide, recombinant cells containing the vector (e.g. bacteria, yeast, plant, animal, mammalian and insect cells) and an anti-CARD antibody. The CARD-containing polypeptide and CARD-encoding nucleic acid are useful for treating a pathology characterised by abnormal cell proliferation (e.g. cancer), abnormal cell death (apoptosis), autoimmune diseases or inflammation. In particular, the polypeptide and nucleic acid are useful for treating keratinocyte hyperplasia, inflammatory hyperplasia, fibrosis, smooth muscle cell proliferation in arteries following balloon angioplasty (restenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias, allergies, arthritis, lupus, Schrogen's syndrome, Crohn's disease, cromens atto-recordence and are useful in a variety of diagnostic applications. The present sequence is a in a variety of diagnostic applications. The present sequence is a process of a particular used to amplify a nucleic acid encoding a CARD-containing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New caspase recruitment domain (CARD)-containing polypeptides and encoding nucleic acids, useful for treating abnormal cell proliferation or cell death, autoimmune diseases or inflammation, e.g. carcinomas, arthritis or stroke
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Caspase recruitment domain; CARD; ss; NB-ARC; ANGIO-R; LRR; SAM; abnormal cell death; apoptosis; autoimmune disease; inflammation; keratinocyte hyperplasia; inflammatory hyperplasia; fibrosis; smooth muscle cell proliferation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated caspase recruitment domain (CARD)

containing polypeptide, or a CARD, NB-ARC, ANGIO-R, LRR or SAM domain

from it, and the polynucleotides encoding them. Also included are a

recombinant vector comprising the polynucleotide, recombinant cells

containing the vector (e.g. bacteria, yeast, plant, animal, mammalian

and insect cells) and an anti-CARD antibody. The CARD-containing

containing the vector (e.g. bacteria, yeast, plant, reating a

polypeptide and cARD-encoding nucleic acid are useful for treating a

pathology characterised by abnormal cell proliferation (e.g. cancer),

abnormal cell death (apoptosis), autoimmune diseases or inflammation. In

particular, the polypeptide and nucleic acid are useful for treating

carticular, the polypeptide and nucleic acid are useful for treating

particular, the polypeptide and nucleic acid are useful for treating

carticular, the polypeptide and nucleic acid are useful for treating

particular, the polypeptide and nucleic acid are useful for treating

carticular, the polypeptide and nucleic seld are useful for muscle cell proliferation in arteries following balloon andioplasty

(restenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias,

graft-versus-host disease, stroke, myocardial infarction, heart failure,

neurodegenerative diseases (e.g. Parkinson's disease or Alzheimer's

disease) or immunodeficiency associated disease or Alzheimer's

disease, or immunodeficiency associated disease (e.g. human

immunodeficiency virus (HIV) infection). The nucleic acids are useful

corrections are useful and any present sequence is a

correction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          H
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (restenosis), gliomas, carcinomas, sarcomas, melanomas, leukaemias, allergies, arthritis, lupus, Schrogen's syndrome, Crohn's disease, graft-versus-host disease, stroke, myocardial infarction, heart failure, neurodegenerative disease (e.g. Parkinson's disease or Alzheimer's disease) or immunodeficiency associated disease (e.g. human immunodeficiency virus (HIV) infection. The nucleic acids are useful in a variety of dispnostic applications. The present sequence is a PCR primer used to amplify a nucleic acid encoding a CARD-containing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New caspase recruitment domain (CARD)-containing polypeptides and encoding nucleic acids, useful for treating abnormal cell proliferation or cell death, autoimmune diseases or inflammation, e.g. carcinomas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated caspase recruitment domain (CARD) recontaining polypeptide, or a CARD, NB-ARC, ANGTO-R, LRR or SAM domain from it, and the polynucleotides encoding them. Also included are a recombinant vector comprising the polynucleotide, recombinant cells containing the vector (e.g. bacteria, yeast, plant, animal, mammalian and insect cells) and an anti-CARD antibody. The CARD-containing polypeptide and CARD-encoding nucleic acid are useful for treating a pathology characterised by abnormal cell proliferation (e.g. cancer), abnormal cell death (apoptosis), autoimmune diseases or inflammation. I particular, the polypeptide and nucleic acid are useful for treating keratinocyte hyperplasia, inflammatory hyperplasia, fibrosis, smooth muscle cell proliferation in arteries following balloon angloplasty
                                                                                                   abnormal cell proliferation; cancer; abnormal cell death; apoptosis; autolimune disease, inflammation; kerathnocyte hyperplasia; inflammatory hyperplasia; fibrosis; smooth muscle cell proliferation; balloon angioplasty; restenosis; glioma; carcinoma; sarcoma; melanoma; leukaemia; allergy; arthritis; lupus; Schrogen; syndrome; crohn's disease; graft-versus-host disease; stroke; PCR primer; myocardial infarction; heart failure; neurodegenerative disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to long terminal repeat (LTR) retrotransposons isolated from Candida albicans. LTR retrotransposons are useful for introducing DNA into the genome of a cell, which involves introducing a transposable element comprising a nucleotide sequence encoding a desired protein, located between LTR sequences. The element can insert into the genome of the cell in the presence of an appropriate integration factor. The integration factor comprises an integrase which preferably is itself included in the transposable element, the integrase being derived from the POL region of the pCal retrotransposon. This is useful for assigning a function to a nucleotide sequence which involves inserting the sequence between the long term repeats, introducing the element into the cell and monitoring it for the presence of an altered phenotype of the cell and method is useful in a gene disruption system or a gene discovery system.

Human; prostate cancer; cytostatic; carcinogen; pharmacodyanamic marker; pharmacogenomic marker; gene; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          selecting a composition for inhibiting prostate cancer in a patient; assessing the prostate cell carcinogenic potential of a commonwal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an isolated nucleic acid molecule (I) comprisi a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:
(a) assessing whether a patient is affilicted with prostate cancer;
(b) monitoring the progression of prostate cancer in a patient;
(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;
(d) assessing the efficacy of a therapy for inhibiting prostate cancer (d) assessing the efficacy of a therapy for inhibiting prostate cancer (d) assessing the efficacy of a therapy for inhibiting prostate cancer (d) assessing the efficacy of a therapy for inhibiting prostate cancer (d) assessing the efficacy of a therapy for inhibiting prostate cancer (d) assessing the efficacy of a therapy for inhibiting prostate cancer (d) assessing the efficacy of a therapy for inhibiting prostate cancer (d) assessing the efficacy of a therapy for inhibiting prostate cancer (d) assessing the efficacy of a therapy for inhibiting prostate cancer (d) assessing the efficacy of a therapy for inhibiting prostate cancer (d) assessing the efficacy (d) assessing the efficacy of a therapy for inhibiting prostate cancer (d) assessing the efficacy (d) assessing th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    assessing the prostate cell carcinogenic potential of a compound; determining whether prostate cancer has metastasized in a patient; assessing the aggressiveness or indolence of prostate cancer in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

    is also useful as a pharmacodyanamic or pharmacogenomic marker.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δλ
  The inventorial distribution of information of the genes in other bacillus cells, comprising hybridising labelled nucleic acid probes isolated from Bacillus cells, comprising hybridising labelled nucleic acid probes isolated from Bacillus cells, comprising hybridising labelled nucleic acid probes isolated from Bacillus cells, examining the array, and determining relative gene expression by an observed hybridisation reporter signal of a spot in the array. The method is useful for mesuring the expression of genes in a first Bacillus cell relative to expression of the same genes in one or more second Bacillus cells. The method is useful for monitoring new genes, identifying possible functions of unknown open reading frames and monitoring gene copy number variation and stability. Monitoring changes in expression of genes may be used to provide a representation of the way on which Bacillus cells adapt to changes in culture conditions, on which Bacillus cells adapt to changes in culture conditions, conviconmental stress or other physiological provocation. Extensive follow-up characterisation is unnecessary, when one spot on an array equals one gene or one open reading frame, since sequence information is the method of the invention.

Converted the sequence represents a genomic sequence tag (GST) used in the method of the invention. In electronic format directly from WIPO appectification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

The invention relates to an isolated caspase recruitment domain (CARD) containing polypeptide, or a CARD, NB-ARC, ANGIO-R, IRR or SAM domain from it, and the polyucleotides encoding them. Also included are a recombinant vector comprising the polyucleotide, recombinant cells are domain to recombinant vector comprising the polyucleotide, recombinant cells and insect cells) and an anti-CARD antibody. The CARD-containing and insect cells) and an anti-CARD antibody. The CARD-containing polypeptide and CARD-encoding nucleic acid are useful for treating a pathology characterised by abnormal cell proliferation (e.g. cancer), abnormal cell death (apoptosis), autoimmune diseases or inflammation. In particular, the polypeptide and nucleic acid are useful for treating particular, the polypeptide and nucleic acid are useful for treating particular, the polypeptide and nucleic acid are useful for treating particular, the polypeptide and nucleic acid are useful for treating cartinocyte hyperplasia, inflammatory hyperplasia, fibrosis, smooth muscle cell proliferation in arteries following balloon angioplasty (restenosis), gliomas, carcinomas, sarcomas, melanomas, leukeemias, allergies, arthritis, lupus, Schrogen's syndrome, Crohn's disease, cartinocyte diseases (e.g. Parkinson's disease or Alzheimer's disease) or immunodeficiency associated disease (e.g. human in a variety of diagnostic applications. The present sequence is a containing protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New caspase recruitment domain (CARD)-containing polypeptides and encoding nucleic acids, useful for treating abnormal cell proliferation or cell death, autoimmune diseases or inflammation, e.g. carcinomas,
inflammatory hyperplasia; fibrosis; smooth muscle cell proliferation; balloon angioplasty; restenosis; glioma; carcinoma; sarcoma; melanoma; leukaemia; allergy; arthritis; lupus; Schrogen's syndrome; Crohn's disease; graft-versus-host disease; stroke; myocardial infarction; heart failure; neurodegenerative disease; Parkinson's disease; Alzheimer's disease; HIV;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

PCMV-SPORT6; Site_1: Not1; Site_2: EcoRV (destroyed); RNA

male lung, age 27; and 1 male testis, age 69. Library is

oligo-dT primed and directionally cloned (EcoRV site is

destroyed upon cloning). Average insert size 18 Rb,

insert size range 1-3 kb. Library is normalized and

enriched for full-length clones and was constructed by C.

Gruber (Invitrogen). Research Genetics tracking code
